

UC Davis AWM Special Lecture and Discussion

Lillian Pierce

Duke University

Tuesday, May 11th, 12-1:15 PM PST

March, April, May...March, April, May. A case study.

Abstract: Our personal life and our intellectual life always exist in close proximity. This has been especially true since the start of the pandemic. As a result, the mathematical work I have been able to do during the pandemic has occurred in quite distinct stages, month by month. I will follow this chronology to lightly sketch a case study of how the pandemic has affected one mathematician's work. By performing this case study, I hope to bring some relief of recognition to mathematicians who are being affected similarly, and also to reflect on what we can do next. A case study is a narrow exercise by definition, but we can use such exercises to ask bigger questions, set bigger goals, and establish new community practices with the potential to help anyone.
